2022 MEMBER EVENTS

Driving digital transformation of the UK property industry

Each year our series of events enables our members to engage and learn from each other and industry leaders. Highlighting how and where PropTech is creating opportunities for the industry and addressing real challenges faced by property companies.

These events will provide opportunities for our members to build business relationships and to tackle barriers to technology adoption.

Last year our events were focused around three main areas: Goal to Net Zero, Housing Crisis and Productivity. This year we will dive deeper into areas such as ESG and sustainability and explore a range of topics across the industry, in the form of roundtable discussions, webinars/seminars and networking events. In addition, we will build on the support we have provided to our PropTech membership with partners and Gold members and address the key barriers to technology adoption.

The events are split into 4 key themes:

THEME ONE Exploring Market Trends

Looking at why technology is essential to property companies in meeting new demands, addressing key challenges and achieving their objectives as we explore the future of the industry and market trends. Covering crucial topics such as affordability and supply of housing, sustainability, and digitisation of processes.

THEME TWO Breaking Down Barriers To Digital Transformation

Tackaling barriers to technology adoption e.g. data (quality, accessibility, usability and standardisation), knowledge of PropTech, people, processes and systems

THEME THREE Driving Growth & Championing PropTechs

Supporting PropTech's in scaling their businesses and overcoming challenges to growth, bringing in partners and members to cover legal advice, recruitment of talent, investment/funding, getting to market

THEME FOUR Facilitating Engagement

Providing opportunities for engagement and collaboration between the ecosystem. With a series of focused networking events for different areas of the industry and for the members to come together.
